### **MidiYodi [Mac/Win] [April-2022]**

MidiYodi is a small-sized and portable Java application, which you can use to view, edit and play MIDI audio files. This application has the following features: open, analyze and play MIDI audio files; separate the tracks on separate channels; examine the track's time and key signatures; view the program's keyboard analyzer; highlight words in any score; play MIDI files with or without score; record MIDI files; change channels; edit MIDI file samples; evaluate the MIDI file with different examiners; and so on. It also lets you configure its parameters as needed. This invention is directed to a portable feeder for food and the like, more specifically, the present invention is directed to a free-standing, portable feeder particularly useful for handling and feeding cereal such as oat flakes. Oat flakes, as well as other cereal flakes or pellets, are a common food item. The normal method of preparation for oat flakes is to grind the oat grain into a product that is between a pulverized grain and a chunky flour, having the texture of bread crumbs. Oat flakes are usually packaged, then stored for a period of time until they are used by an end user. Since oat flakes are one of the most popular food items, there is a high demand for storage in an ideal manner for an extended period of time. Oat flakes, however, are highly susceptible to becoming rancid, which is one major reason they are not viewed as a very desirable food item. Also, the oat flakes must be stored in a manner that will not support the growth of any type of insect life.

Furthermore, the conditions of storage and shipment must be such as to prevent the oat flakes from being ground up or otherwise spoiled during the storage or shipment process. The prior art is replete with attempts to solve the problem of storing and handling oat flakes. U.S. Pat. No. 3,302,919 teaches a method of preparing a food product in the form of a solid mass of oat flakes or small particles mixed with a liquid,

and then freezing the mixture. U.S. Pat. No. 3,902,576 teaches a method of freezing food products. The food products are mixed with a freezing agent, and then placed in a freezing chamber. The products are frozen and a mass of frozen particles is formed. U.S. Pat. Nos. 4,804,476 and 4,687,714 teach a food product of oat 09e8f5149f
