Q: Make checkbox inside fancybox not clickable on mobile I'm making a photo gallery website where the client wants each photo to be opened in a fancybox with an image overlay over it. Each photo is a link to its own page. For some reason the checkbox seems to be clickable even when I disable the default link. I've tried using the class "fancy-disabled" and "fancy-dis-off" but it doesn't work. Here is the code: HTML All 77a5ca646e

The original app to create HDR photos. What is HDR? HDR stands for High Dynamic Range and it is a function that helps you incorporate a wide range of light and dark tones in your images. If you often find yourself attempting to create or enhance HDR photos, you can try WidsMob HDR. Supports a plethora of source formats You need to add the graphic files you want to process, by manually navigating to their location (you are not allowed to simply drag and drop them onto the main window). On the upside, there are several supported formats for you to choose from when it comes to your source files, such as JPEG, BMP, PNG and TIFF. What's more, you can also add raw formats, meaning you can just copy the photos from your digital camera and start working on them, without you needing to convert them first. It is worth mentioning that WidsMob HDR requires you to load at least 3 images with different exposures if you hope to obtain a high-quality HDR photo. Apply enhancements to your HDR pic The final step once you generated the HDR is to fine-tune it to your liking. You can alter the color opacity, saturation, brightness and contrast, while also applying a vignette. You can view the result of each modification in real-time, so you can discard the changes you are not pleased with and adjust the sliders as you see fit. Additionally, you can apply one of the supported filters: Classic, Concept Art or Black/White. In a nutshell To wrap it up, WidsMob HDR can help you create eye-catching HDR images without too much effort on your side. The entire process is straightforward and no technical skills are needed, since you can just preview every change and keep only the ones that impress you. WidsMob HDR ScreenshotsQ: How to capture the output of a command into a variable in Go? What is the idiomatic way to capture the output of a command into a variable in Go? In Perl, I would just write something like this: my \$result = `some_command`; But I'm having a hard time finding examples of how to do it in Go. A: Try the following: package main import ("fmt" "os") func main() { output, err := os.
